 How Success Is Measured

Dairy Comp 305

**MILK PREGNANCY TEST
NOW AVAILABLE!**

Pregnancy confirmation made easy.

- \$4.75 per sample
- Use this test anytime 35 days post breeding and 60 days post calving
- 98% Accurate
- Results available 48 hours after lab processing
- Eliminates additional time and labor to sort, restrain, and sample animals

Call us if you are interested in having samples tested!

Changes with Mastitis DNA Testing

Effective October 2013, we have discontinued the use of the Complete12 - Full Panel test. Please see the chart below to find what each target organism is detected in each test.

We have 2 tests available:

Complete16 Test - \$30 per sample

Contagious Test - \$20 per sample

Call us if you are interested in having samples tested!

Did You Know?	Target organisms:	Complete -16	Major -3
	<i>Staphylococcus aureus</i>	X	X
	<i>Coagulase negative staphylococci</i>	X	
	<i>Streptococcus agalactiae</i>	X	X
	<i>Streptococcus dysgalactiae</i>	X	
	<i>Streptococcus uberis</i>	X	
	<i>Escherichia coli</i>	X	
	<i>Corynebacterium bovis</i>	X	
	<i>Enterococcus faecalis and faecium</i>	X	
	<i>Klebsiella pneumoniae and oxytoca</i>	X	
	<i>Serratia marcescens</i>	X	
	<i>Arcanobacterium pyogenes and Peptostreptococcus indolicus</i>	X	
	Staphylococcal beta-lactamase gene	X	
	<i>Mycoplasma bovis</i>	X	X
	<i>Mycoplasma species</i>	X	
Yeast	X		
<i>Prototheca species</i>	X		

Johnes Testing

- \$5.25 per sample
- 60 days prior to dry off shows the best results!

Call us if you are interested in having samples tested!

The biggest news of the year is the purchase of the Bentley FCM/FTS Combination Milk Testing System. In addition to the traditional Butterfat, Protein, Lactose, Solids, and Somatic Cell testing, we can also test for MUN's!

It has increased our capacity from 240 samples per hour to 450 samples per hour. A lot of training and great flexibility from our staff have made it a very easy and successful transition.

MUN – Milk Urea Nitrogen

MUN can be tested in several ways but traditionally the testing involves milk samples. MUN results vary from herd to herd and it can vary within multiple cows within one herd. The variation between herds and cows indicates a range in protein, energy, and water intake. This could show signs of potential problems with your feeding programs. Bulk tank or pen samples are they preferred samples to be tested.
